ESG

IMS

Achieve excellence in **ESG**, **Corporate Sustainability**, and **Integrated** Management Systems

With CLAM, you will be partnering with a team of specialists dedicated to helping your company achieve excellence in ESG, Corporate Sustainability, and Integrated Management Systems.

CORPORATE SUSTAINABILITY

CLAM is also the ideal strategic partner for organizations on the journey toward **corporate sustainability** through a range of services and products that complement environmental practices (physical, biotic, and socioeconomic) and expand into ESG initiatives, encompassing **Environmental, Social, and Governance Pillars** in a unique and comprehensive way

Transforming ESG, Sustainability, and IMS challenges into growth opportunities

ESG, a ESG, Corporate Sustainability, unified with IMS (Integrated Management System), offer more than compliance in environmental, social, and governance aspects; they bring operational efficiency, cost reduction, transparency, and a deeper connection with stakeholders, generating shared value for all.

It is a winning strategy that combines **responsibility with profitability.**

CLAM deeply understands the nuances and complexities of corporate sustainability. We are ready to guide organizations on this journey and help them advance in the ESG Agenda with confidence and efficiency.

ESG

Solutions

ESG and Corporate Sustainability in Focus for Companies

Establishing the ESG and Corporate Sustainability concept requires a high commitment, but the **benefits** can be **exponential**, providing a sustainable trajectory for the company, and maintaining its permanence in the market.

It involves the real and genuine integration of environmental, social, and governance concerns into a company's operations and strategies.

The ultimate goal is to achieve **sustainable evolution**, where the organization operates in a balanced and continuous manner, positively contributing to a broader ecosystem and positively impacting clients, employees, communities, and the world at large.

ESG Diagnosis

Meticulous and personalized ESG Diagnosis, essential for companies seeking to align their operations with the best sustainability practices. Our diagnosis is the starting point for understanding current sustainability performance and identifying opportunities to advance in the ESG concept. It includes a detailed analysis of internal and public documents, as well as interviews with key areas and identification of gaps and opportunities. The result is a detailed diagnosis, which serves as a fundamental management tool for decision-making and future action planning.

Materiality in Sustainability

Identifica e prioriza os temas e aspectos mais relevantes para a organização e suas partes interessadas nas áreas ambiental, social e de governança. Realizamos entrevistas e pesquisas com stakeholders para entender a relevância, prioridade, riscos, oportunidades e impactos de cada tema proposto na estratégia de sustentabilidade. Após análise dos dados, é elaborado um Relatório de Materialidade, oferecendo recomendações estratégicas e um plano de ação para diretrizes ESG alinhadas ao setor de atuação da organização.

Sustainability Report (GRI/SASB/TCFD)

Comprehensive view of the company's sustainability performance. Using globally recognized methodologies, this report not only meets international reporting standards but also demonstrates the maturity of the company regarding ESG pillars. It is a public document aimed at transparency in the company's communication with its stakeholders and presents its sustainability strategy. Furthermore, it is an internal and external management document of the company.

ESG Performance Report

Differentiating from the Sustainability Report, the ESG Performance Report offers a flexible and comprehensive perspective on the company's actions regarding ESG issues. It also aims to present to stakeholders the actions taken by the company regarding environmental, social, and governance issues, but without the rigidity and obligation to follow certain methodologies, while maintaining the robust quality of reporting. It provides a clear view of the organization's initial progress on its ESG journey, with a high standard of information quality and reliability.

Greenhouse Gas Inventory (GHG)

Our GHG Inventory service provides a comprehensive assessment of greenhouse gas emissions generated by the company's operations. We use globally recognized methodologies to quantify direct and indirect emissions, including those associated with production, energy, transportation, and other operational processes. An essential document for understanding the organization's environmental impact, as well as serving as a basis for mitigation actions.

Development of Climate Mitigation Plans

After compiling the GHG Inventory, work is done to develop effective and customized climate mitigation plans. Designed to help companies achieve emission reduction goals, aligned with Global Sustainability Initiatives and Sustainable Development Goals. We offer practical and viable strategies that may include process optimization, investment in clean technologies, transition to renewable energy sources, and carbon offsetting.

ESG Gap Analysis

Specialized service designed for companies that are not only seeking to meet but also to lead the sustainability and corporate responsibility scenario. The process includes a comprehensive assessment of the company's current practices against ESG standards, including identifying gaps and challenges, strategic and personalized recommendations, action plan, and support and follow-up in implementation. ESG Gap Analysis helps the organization identify improvement opportunities, align with industry best practices, and advance the ESG concept.

ISE Consulting (Corporate Sustainability Index of B3)

Specialized consulting for guidance to the ISE, Corporate Sustainability Index of B3, Brazilian Stock Exchange. Designed for companies seeking not only to improve their sustainability practices but also to achieve market recognition for their efforts. We conduct a detailed assessment of the company's current sustainability status, aligned with ISE criteria, including analysis of environmental, social, governance, and economic practices.

ESG Modular Deliveries

ESG Modular Deliveries are a major differential of CLAM, combining flexibility and sustainability through an innovative approach, involving adaptation and customization of deliveries to the specific needs of companies, always with a strategic view and long-term vision. At the same time, it offers various other benefits, such as the ability to adapt the size, frequency, and content of deliveries according to the clients' own demands.

CLAM ESG Vision

The CLAM ESG Vision service is an innovative solution in Sustainability and ESG (Environmental, Social, and Governance) for the development of training, sustainability reporting, and other reporting forms in an audiovisual format, designed to capture attention and stimulate ESG awareness and communication. Each communication piece is carefully crafted by sustainability and digital education experts, ensuring updated, engaging, and relevant content.

Prioritization of SDGs in Organizations

A incorporação dos ODS no âmbito corporativo reflete um compromisso com a sustentabilidade, guiado por um entendimento profundo dos impactos que uma organização tem no mundo. A priorização de ODS específicos é um processo estratégico que se baseia na identificação criteriosa dos impactos que exercem, tanto positivos quanto negativos, assim como a identificação de riscos, oportunidades, forças e ameaças. Assim, as organizações podem alinhar suas operações e estratégias com os ODS de maneira significativa e efetiva, com uma visão holística, inclusive no que toca à sua cadeia de valor.

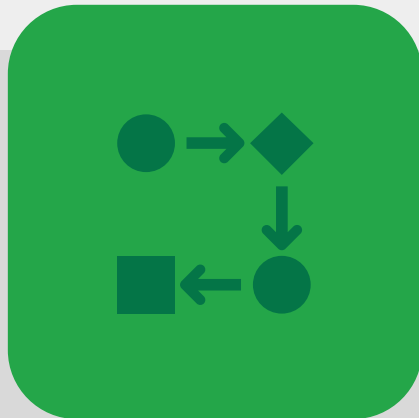

IMS

Solutions

Operational Excellence through Integrated Management System Implementation

In an increasingly competitive and regulated market, we understand the importance of not only meeting market expectations and demands but exceeding them, ensuring both sustainability and operational efficiency simultaneously.

An Integrated Management System enables organizations to apply a complete and unified management model for continuous improvement of their operational processes in various areas, through obtaining Certification in ISO International Standards, recognized worldwide.

[Learn more](#)

IMS Implementation Consulting

Specialized consulting to guide companies in implementing an SGI, effectively integrating quality management, environmental, health and occupational safety, social responsibility, information security, compliance, anti-bribery, food safety, logistics chain, energy management, among others. With our expertise, we help align operational processes and transform the IMS into a competitive advantage, bringing efficiency, risk reduction, and continuous improvements with a long-term vision. Implementation Consulting for Integrated Management System of ISO 9001 / ISO 14001 / ISO 45001 / ISO 22000 / ISO 50001 / ISO 37001 / ISO 37301 / ISO 27001 / ISO 27701 / AS 8000 / NBR 16001 / among others.

IMS Outsourcing

Outsourcing, or IMS outsourcing, is a resource that allows the use of our specialized expertise to develop, implement, and manage management systems that integrate essential aspects such as quality (ISO 9001), environment (ISO 14001), health and occupational safety (ISO 45001), and other relevant standards in organizations. It is an innovative approach that allows companies to focus on their core competencies, while our dedicated experts continuously manage the implementation and maintenance of the organization's management systems.

Aspects and Impacts and Hazards and Risks

The Environmental Aspects and Impacts and Occupational Health and Safety Hazards and Risks Survey is a critical step in implementing an Integrated Management System (IMS). This process involves the identification, analysis, and proactive management of potential environmental impacts and health and safety risks associated with an organization's activities, products, or services. It is essential to ensure compliance with standards and regulations, as well as to promote a safe and sustainable work environment.

IMS Internal Audit

The IMS Internal Audit process goes beyond simply verifying compliance with requirements, seeking to understand the effectiveness of the IMS in achieving companies' strategic objectives. We evaluate how the different elements of the system are integrated and contribute to the overall performance of the organization. This includes a detailed examination of processes, procedures, controls, records, training and communication practices, as well as leadership involvement and management commitment. After the audit is completed, a detailed report with analysis and recommendations is provided.

Internal Legal Compliance Audit

The Internal Legal Compliance Audit is essential for any organization seeking to ensure its alignment with current standards and requirements. Designed to identify, assess, and manage the legal risks associated with business operations, ensuring they are always one step ahead in meeting legal obligations. Our audit team has deep knowledge of standards and regulations in different sectors and regions, ensuring comprehensive and up-to-date analysis. We conduct a thorough assessment to identify non-conformities and potential vulnerabilities.

Supplier Audits

Supplier Audits are a fundamental process for companies seeking to ensure compliance, quality, and sustainability in their supply chain. It is a systematic evaluation conducted by the audit team to inspect and review suppliers' operations, practices, and documentation. Important for mitigating risks, ensuring business continuity, and maintaining brand integrity. It allows for the identification and addressing of potential issues in the supply chain before they become critical, ensuring compliance, product/service quality, and commitment to ethical and sustainable practices.

ISO Standards Training

Comprehensive and specialized training in ISO Standards Interpretation and Internal Auditing. Courses carefully designed to empower professionals with the knowledge and skills needed to deeply understand and apply ISO standards in companies, such as ISO 9001 (Quality), ISO 14001 (Environment), and ISO 45001 (Occupational Health and Safety), among others. Correct interpretation and implementation of these standards are essential for operational efficiency, regulatory compliance, and continuous improvement of the IMS.

Certification Audit Follow-up

An exclusive service designed to guide and support companies throughout the process of obtaining ISO Standard certifications, acting as facilitators with the certification body. Our team of experts ensures that all requirements are clearly understood and met at all stages of the certification process. This includes preliminary review of existing management systems, identification of areas needing improvement, assistance in developing and implementing necessary processes, and preparation and support during the external certification audit.

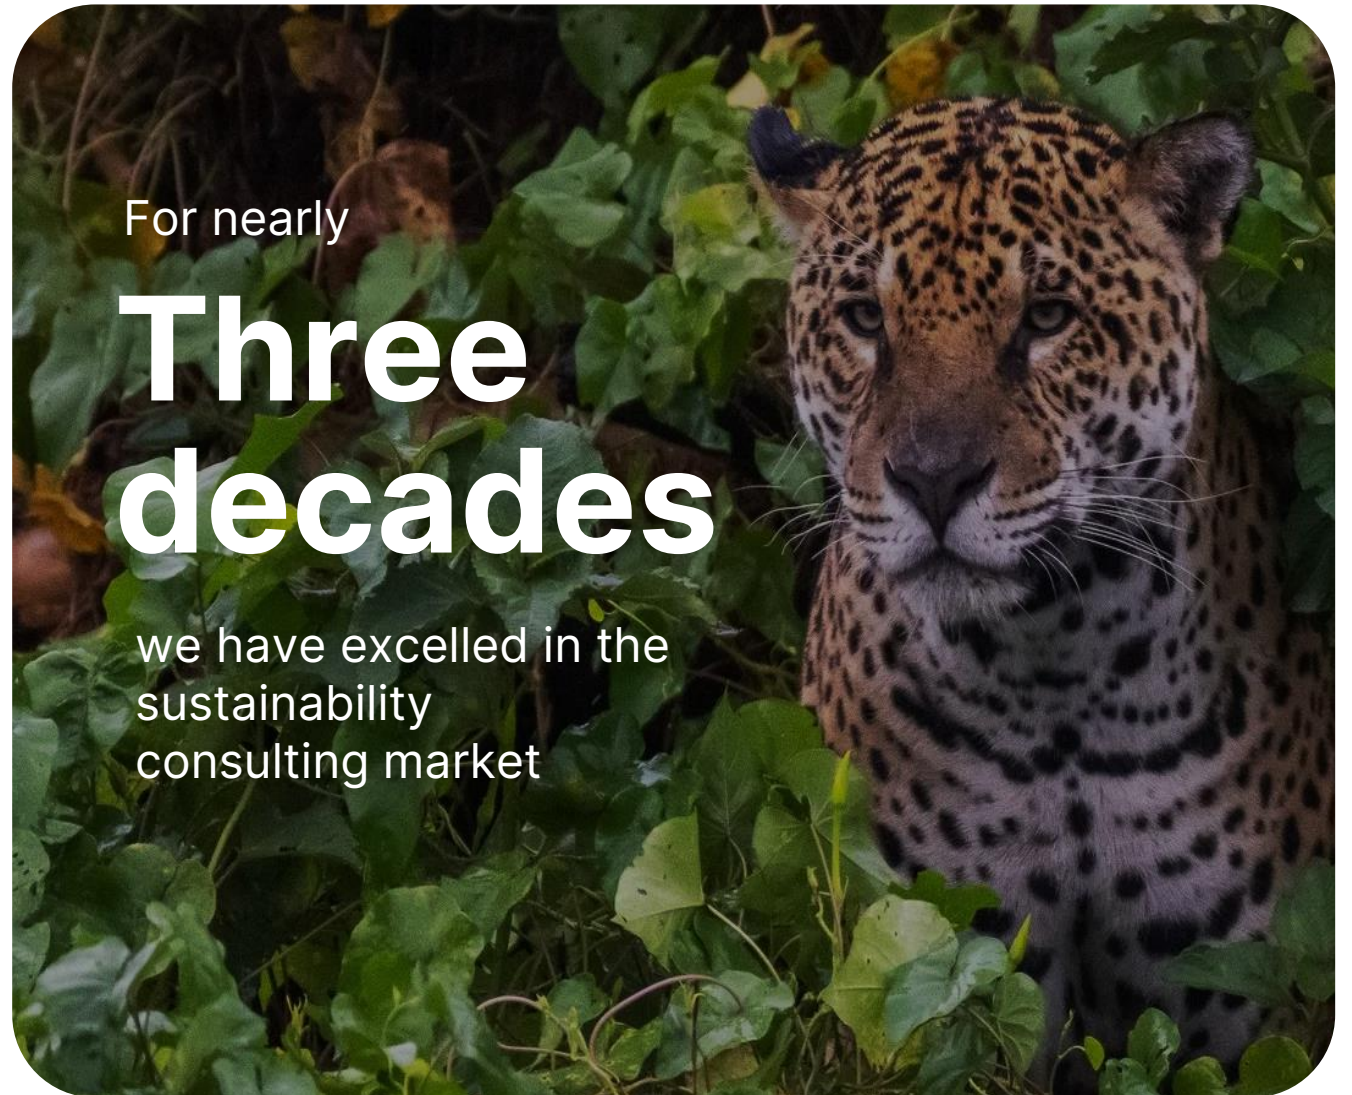

CLAM stands out with a **unique and innovative** approach based on market intelligence.

Our work aims to assist organizations in becoming **leaders in sustainable practices**, effectively responding to the growing expectations of consumers, investors, regulators, and other stakeholders.

For nearly

**Three
decades**

we have excelled in the
sustainability
consulting market

A photograph of a person wearing a blue uniform and a red helmet, crouching in a dark, rocky cave. A beam of light from a flashlight illuminates the person and the surrounding rock formations. The text "A unique Way Of Sustainability." is overlaid on the left side of the image in white, bold, sans-serif font.

**A
unique
Way Of
Sustainability.**

CLAM's differential lies in the combination of strategic insights with the ability to effectively operationalize them.

In addition to its **tireless desire** to ensure that actions are geared towards enabling the planet to evolve in a more balanced and sustainable way.
